

- Read, search, brainstorm and decide on the idea; **starting today!**
- Undergraduate Students most form groups.
- **Wednesday Feb. 4**
 - Submit a 1-page project proposal
 - Present the project proposal; 1-2 ppt slide(s)

Grading:

- 1-page project proposal and presentation; 10%
- 2 x progress update presentations; 2 x 20% (Webpage)
- Final presentation: 30% (Webpage)
- Final poster: 20% (Showcase Day)

- Ideas are only to get you thinking; your project can be on any topic; choose something that will help harness your enthusiasm.
- The project will expose you to a broader range of the activities that come up in real engineering applications, instead of the narrow core covered in class.
- Real/synthetic signal; no ideal signals.

Your proposal must have the following structure, using these section headings:

- **Introduction:** A general description of the area of your project and why you're doing it.
- **Problem Specification:** A clear technical description of the problem you're addressing. Formulating a general problem into a well-defined technical goal is the most important part of a project.
- **Data:** What are the real-world and/or synthetic signals you are going to use to develop and evaluate your work?

- **Approach:** A description of how you went about trying to solve the problem. Sometimes you can make a nice project by contrasting two or more different approaches.
- **Evaluation Criteria:** How are you going to measure how well your project performs? You want to be able to demonstrate and measure improvements in your system.
- **Conclusions:** What did you learn from doing the project? What did you demonstrate about how to solve your problem?
- **References:** Complete list of sources you used in completing your project, with explanations of what you got from each.
